

Sustainability Statement

As industry leaders, it is our responsibility and mission to advocate the protection and preservation of our environment.

At Allan Copley Designs, we have an obligation to our clients, ourselves and the world community to promote recycling, reuse and responsibility in all policies and practices of our business. For the manufacturing of our products, we are dedicated to the purchasing of supplies from vendors who are vested in recycling, channeling waste solvents through recovery companies and recycling all scraps and leftovers.

We strive to formulate finishes that maximize employee safety as well as minimize environmental impact. We are continuously on the lookout for the most up-to-date research and technology to improve our in-house recycling and reuse methods.

As a member of the SFC, we acknowledge the tremendous urgency, and take immediate steps to minimize carbon emissions, waste stream pollutants, un-recyclable content and primary materials from unsustainable sources from any product platform under our control.

Our Company is committed to equal employment opportunity. Health and Safety standards are one of our major concerns and we require all our manufacturing plants and vendors to keep their facilities within standards.

We pride ourselves on keeping our clients and Earth in mind during our design and production process to contribute to a better and greener tomorrow.
